<sup>†</sup> Certificate, Royal Sanitary Institute, Meat and Food Inspection.

<sup>\*</sup> Certificate, Liverpool University, Meat and Food Inspection.

<sup>§</sup> Certificate, Central Midwives Board.

Health Department, St. Martin's House, Chester.

Mr. Chairman, Ladies and Gentlemen,

The extension of the City Boundary on 1st April, 1954, increased the area from 4,142 acres to 4,659: the population in the new area was 58,100 compared with 48,200, and the number of inhabited houses went up from 13,085 to 15,519. The Rateable Value rose from £440,014 to £497,365 and the sum represented by a Penny rate from £1,796 to £2,057.

Some increase in the Staff of the Department was inevitable. One full time Assistant Medical Officer of Health/School Medical Officer was appointed; one Health Visitor/School Nurse, one District Nurse, one Sanitary Inspector, one Domestic Help, one Ambulance Driver, and part of the services of a Clerk.

A Tuberculosis After-Care Committee was formed, arrangements were made for B.C.G. Vaccination, and for the better supervision of Tuberculosis Patients at home. The Mobile Mass X-ray Unit of Liverpool Regional Hospital Board commenced another profitable visit to Chester in December, 1954.

Our Antenatal Clinic was closed and the premises were used for a new function—that of the Sale of Welfare Foods to the public—formerly carried out by the Ministry of Food.

You decided on the erection of a new Public Abattoir, (should Chester be chosen for a Centre) and control of the Queen Street Abattoir came once more under the Council.

The Occupation Centre, opened in 1953 for the training of ineducable children, expanded to admit more City cases and some County ones. The transport arrangements for the pupils were revised and improved.

We suffered the loss, through retirement, of several members of the Staff who had been with us many years. I would like to express to them as well as to the remaining Staff, my sincere thanks for their enthusiasm and skill in past years.

Finally, we are grateful for the stimulus you have given us in our work by your keen and lively interest and by your most welcome guidance throughout the year.

I have the honour to be,

Your obedient servant,

D. F. MORGAN,

Medical Officer of Health.

## GENERAL DEATH RATE

There were 614 deaths in Chester residents giving a death rate of 10.5 per 1,000 population.

Comparative figures are as follows:-

England and Wales				•••		 	11.3
Great Towns		•••				 	11.1
Smaller Towns		•••				 	11.3
CHESTER (compar	rability	factor	(1.02)	applied	i)	 	10.7

The Death Rate of 10.5 per 1,000 population (adjusted by the Area Comparability Factor to 10.7 per 1,000) is the **lowest Death Rate** ever recorded in the City. In these records, which go back to 1867, there was a crude Death Rate in 1928 of 11.4, adjusted to 10.8, and last year (1953) there was a crude Death Rate of 10.8 adjusted to 11.0.

Adjustment of the Crude Death Rate is made by multiplying it by the Area Comparability Factor—a Factor calculated by the Registrar General to adjust the figures for age and sex distribution of the population.

372 deaths or 60 per cent. occurred in the age group 65 years and over.

Heart disease accounted for 188 deaths and other circulatory conditions for 29 deaths.

Bronchitis was the cause of death in 27 cases, pneumonia in 23 and other respiratory conditions in 6 cases.

Cancer accounted for 131 deaths, of which 42 were in the age group 65 years and over, and 29 were of the lung or bronchus.

There were 14 deaths from pulmonary tuberculosis and 1 death from other causes of tuberculosis.

It is gratifying to note that there were no deaths from Diphtheria, Measles or Whooping Cough.

#### INFECTIOUS DISEASES.

306 cases of measles and 102 of whooping cough were notified. The figures for 1953 were 375 and 127 respectively. Scarlet Fever cases numbered 24 compared with 20 in 1953.

There were no cases of diphtheria notified.

Food poisoning notifications totalled 3, details of which are shown under the relevant heading.

The outbreak of measles was followed by a smaller outbreak of whooping cough, and it will be seen from the table that the majority of cases occurred between 5 and 10 years of age.

#### FOOD POISONING.

Special mention is made of this disease because of its ever present threat (especially in a centre such as Chester), because of its "preventability", and because notification of cases must be immediate if effective action is to be taken.

No outbreaks occurred during the year; all the cases notified were isolated ones. Where patients had eaten suspected food outside the City area, information was passed to the Medicai Officer of Health concerned. Similarly when patients notified in other areas had taken food in Chester, a thorough investigation of the suspected source was made.

I would emphasise the necessity for immediate notification in Food Poisoning and, in cases of doubt it is better to have a notification, subsequently cancelled, than to miss a single carrier who may give rise to widespread distress and tragedy in future years.

#### TUBERCULOSIS NOTIFICATIONS.

The Public Health (Tuberculosis) Regulations, 1952 require that new notifications be accepted by the authority in whose area the case is first notified. Details of such notifications are as follows:—

Total of new cases notified (see table					
Not normally resident in City			• • •	• • •	15
:					55
Normally resident but notified to otl	her autho	orities			4
Total of new cases normally resident	in City	• • •		• • •	59

	Totals		41	19	6	4	9	5	I	0					

An account of Preventive and After-Care work is given under Prevention of Illness, Care and After-Care, later in the report.

## PUBLIC HEALTH ACT, 1936, Section 172.

There has been no occasion to enforce removal to Hospital of a patient suffering from respiratory Tuberculosis.

#### VENEREAL DISEASE.

A clinic is held at Chester Royal Infirmary at the following times:

Monday (5—7 p.m.) Female. Wednesday (5—7 p.m.) Male. Thursday (5—7 p.m.) Female. Saturday (12—2 p.m.) Male.

The following is the number of Chester patients attending during each year for the last five years:—

There was a welcome decline in the number of cases attending the clinics, pointing to lowered incidence. It is apparent, too, that patients are becoming more willing to attend the treatment centre.

Warning must be given of the dangers of incomplete treatment. It is so easy to obtain drugs and antibiotics outside the clinics and to have incomplete treatment which relieves the initial symptoms of Venereal Disease (but does not cure it), that there is a real danger of the disease lighting up again in future years in much more serious and tragic forms.

Efforts were made to trace contacts, but the information obtained from clinics and M.I. Rooms is all too scanty and infrequent. The numbers have fallen off greatly and there is insufficient liaison between the Treatment Centres and the Local Authority Services. The difficulties of devulging confidential information are appreciated, but the Local Health Authority has a duty to prevent illness—and employs a trained staff of Health Visitors and Medical Officers who can do much more to wipe out the V.D. scourge if they are given the chance.

Where case histories have been given, it has been possible—even with scanty information—to secure the co-operation of the patient or contact. I would congratulate the staff on their successes even when it seemed impossible on the information given, to trace people suffering from V.D.

#### LABORATORY SERVICES.

The Pathological Departments of the Chester City Hospital, the Royal Infirmary and the Medical Research Council Laboratory at Birkenhead have continued to examine all types of specimens sent either by general practitioners or the Health Department.

There is excellent co-operation between the Laboratories and the Health Department.

# SERVICES PROVIDED UNDER NATIONAL HEALTH SERVICE ACTS

# 1. CARE OF MOTHERS AND YOUNG CHILDREN (Section 22).

# (i) Expectant and Nursing Mothers.

The Antenatal Clinic which was formerly held at the Princess Street Clinic weekly, was closed down on 1st April, 1954. Almost all of the patients were those whose confinements were booked in the City Hospital, which Hospital has its own Antenatal Clinics. It was suggested that an Antenatal Clinic attended by the Municipal Midwives might be run with advantage to Midwives and patients; but as many General Medical Practitioners in the City have their own special sessions for Antenatal care, it was felt that the need for a Health Department Clinic was not so acute in Chester as it would be elsewhere. Many Doctors are able to devote some time to the teaching of the hygiene of Pregnancy, Relaxation exercises, preparing for the confinement and instruction in Analgesia which would be taught at such a Clinic.

The possibility of a Consultant Antenatal Clinic, attended by Doctors of Consultant status was considered. Here it was felt that the facilities offered by the City Hospital were adequate to deal with the

18 Number of Mothers seen by Doctor ... 33 Number of attendances Number of post-natal cases ...

# (ii) Infant Welfare.

In addition to the Clinics held at St. Martin's House (Monday and Thursday afternoons), at Blacon (on Wednesday afternoons) and at Saltney (on Tuesday afternoons), when the City Area expanded to include Hoole on 1st April, arrangements were made with the Cheshire County Council for the continuation of the Hoole Clinic at 55, Hoole This was open on Tuesday afternoons. An Assistant Medical Officer of Health attended, together with Health Visitors. Welfare Foods were on sale at all the Clinics by arrangement with the Ministry of Food.

Cases requiring Medical attention were referred to their own General Medical Practitioners.

#### (iii) Premature Infants.

The Premature Baby Unit at the City Hospital was able to cope with most babies below 5½ lbs. so that few were nursed at home. Such nursing equipment as was necessary in the home was available on loan from the District Nurses' Home.

By arrangement with the Physician-in-Charge, the Health Visitors attended at the Premature Baby Unit of the Hospital. Staff shortages prevented as full attendance as would have been liked. On discharge home, Premature Babies were visited by the Health Visitors,

# (iv) Supply of Dried Milks, etc. (Welfare Foods)

National Dried Milk and all Welfare Foods and nutrients under the Government Welfare Foods Scheme are available at all the Infant Welfare Clinics. Clerical work is undertaken by the Council's Staff. Many other kinds of Dried Milk Foods and Nutrients are also available at the Clinics, and the Council's Scheme provides for the free issue of these to necessitous cases.

On 9th August, 1954, the Sale of Welfare Foods, which had formerly been a function of the Ministry of Food and which had recently been taken over by the Local Health Authority, was transferred to premises at the Bishop Graham's School, Princess Street.

Two full time Clerks were employed for the Sale of National Dried Milk, Orange Juice, Cod Liver Oil and Vitamin Tablets, and they, together with the Staff of the Department, carried out the necessary clerical and recording work. The possibility of opening branch Depots in other parts of the City was considered. The Centre at Princess Street is open daily from 9-0 a.m. to 5-30 p.m. and from 9-0 a.m. to 1-0 p.m. on Saturdays.

## (v) Dental Care.

With the Dental Staff increased to two full time Dental Surgeons, it was possible to devote more time to the care of Expectant and Nursing Mothers and Young Children. In the tables which follow it must be remembered that on 1st April, the area of the City expanded to include Hoole U.D.

(a)-Numbers provided with Dental Care:

Expectant and Nursing Mothers	9	42			19	5			•••
Children under Five	1	43	11	•••	122	69	•••	•••	•••

#### (vi) Institutional Provision for Mothers and Children.

The Maternity Department of the City Hospital provides the necessary accommodation for a wide area.

The Paediatric Department centred on the City Hospital has accommodation for marasmic and ailing babies and premature infants.

Healthy children up to the age of three are admitted to the Lache Nursery and children over the age of three to Eaton Park View, Wrexham Road, both being administered by the Child Care Committee of the City Council. Periodic examinations and examinations on admission and discharge are carried out by the staff of the Health Department.

## Care of Unmarried Mothers and their Babies.

Where application for accommodation in Voluntary Mother & Baby Homes was made, the Chester & District Moral Welfare Association enquired into the case and found accommodation in a Home. The Council contributed towards the cost, the normal period being from six weeks before to six weeks after the expected confinement, with the possibility of extension where necessary in the interests of mother and baby.

The eases were followed up at home by the Health Visitors.

Under the Scheme, seven unmarried mothers were assisted during the year, compared with four in 1953. These were brought to the notice of the Health Committee by the Chester & District Moral Welfare Association and I would like to pay tribute to the Outdoor Worker for the work she has done in investigating and arranging for the accommodation of these cases, as well as for other Chester cases not assisted by the Corporation.

It is not an easy matter to find vacancies in the right kind of Mother and Baby Home, and still less to interview putative fathers to try to get them to accept their responsibilities. Yet in all the cases assisted by the Corporation, investigations of this nature were carried out and, where necessary, the expectant mother was advised to apply for an Affiliation Order.

#### Nursing Homes.

There were two Nursing Homes on the register at the end of the year. The number of available beds was 24.

# Nursery and Child Minders (Regulations) Act, 1948.

One application for registration under the above Act was granted, subject to the maximum accommodation for ten children.

# 2. MIDWIFERY (Section 23).

The Chester City Council employs 6 Full-time Municipal Midwives for Domiciliary work, under the supervision of a Lay Supervisor (who is Superintendent Health Visitor).

The Ante Natal care of women to be confined at the City Hospital is carried out at the Hospital's Clinic.

All Corporation Midwives are trained in, and have available, Gas & Air Analgesia, and the use of other analgesics, e.g. Pethidine.

Close co-operation was maintained between the Municipal Midwives and the doctors undertaking Domiciliary Midwifery, and the Medical Aid Scheme provided for adequate medical attendance at the confinement, the Doctors' fees being paid either under their arrangements with the Executive Council, or by the Corporation (if another Doctor had to be called).

49 cases were so attended.

The City Hospital referred to the Health Department those cases who wished to book confinements at the Hospital, but did not fall into one of the necessitous groups, and, where home circumstances permitted, arrangements were made for confinement at home. Conversely, where home circumstances rendered home confinement undesirable, the case was referred to the City Hospital.

276 confinements were attended by the Municipal Midwives, 253 as Midwives and 23 as Maternity Nurses.

## STATISTICS.

No. of cases attended as midwives		•••	• • •	253

Stillbirth	•••	•••	• • •			2
				7	Cotal	49

#### Ophthalmia Neonatorum.

No cases were notified during the year.

# 3. HEALTH VISITING (Section 24).

Eight full-time Health Visitor-School Nurses are employed, and a Superintendent who is also Supervisor of Midwives.

The duties are approximately half School work and half Health Visitor's work. Besides the normal attendance at Ante Natal and Infant Welfare Clinics, domiciliary visiting included:—

- (a) Aged sick on Hospital Waiting Lists.
- (b) Tuberculosis-Care and After Care.
- (c) Mental Defectives on licence, leave and statutory and Voluntary Home supervision; reports on home circumstances.
- (d) After Care of some patients previously dealt with under Lunacy and Mental Treatment Acts.
- (e) Visits to Problem Families.
- (f) Venereal Disease Contacts.
- (g) Cancer Research enquiries.
- (h) National Survey of Nutrition.

In the cases of children discharged after In-Patient Treatment, the Hospitals sent to the Health Department copies of the reports to the General Medical Practitioners.

These cases were followed up by the Health Visitor-School Nurses.

The following visits were paid by the Health Visitors (excluding School Nurses' work).

Primary Birth Visits	•••	• • •	 	•••	891
Return Visits			 		4432
Visits to children (1—5 years)			 	• • •	9072
Visits to Expectant Mothers			 	• • • •	378
Other Visits			 	•••	2027
Visits to Midwives			 		27
Visits to Cases of Tuberculosis			 		831

# 4. HOME NURSING SERVICE (Section 25).

The District Nurses' Home, which is affiliated to the Queen's Institute of District Nursing, provided residential accommodation for six whole-time District Nurses and the Superintendent. Recruitment difficulties have obliged the Health Committee to appoint some District Nurses as Non-residential. There is close co-operation with the General Practitioners on their cases, and with the Hospitals regarding the admission and treatment on discharge of the patients.

No regular night shift is worked, but a rota of evening duties is maintained and Nurses are available at the Home for emergency night calls.

Arrangements were started this year for a District Nurse to attend a Refresher Course and one Nurse attended during 1954. This brings the Service into line with the facilities for Refresher Courses which the Corporation provides for Health Visitors and Midwives.

Nursing equipment is available and during the year 157 articles were on loan or hire.

Transport is by bicycle and public transport and a car is kept for the Superintendent's, emergency or long distance use.

 $\overline{\mathcal{Q}}$ 

コンコンドラ シスプス・コンド ション・ロー

The total numbers of Cases and Visits in 1953 were 911 and 21,928 respectively.

# 5. VACCINATION AND IMMUNISATION (Section 26).

Besides the facilities available at Doctors' Surgeries, Immunisation against Diphtheria is given at all Infant Welfare Clinics, and it has been the practice to hold an Immunisation Session at the Schools at the end of each School Medical Inspection.

Immunisation against Diphtheria alone is generally done, but where request was made, this was combined with Whooping Cough Immunisation.

By holding sessions at the School Medical Inspections, a good follow-up with Booster doses is maintained.

The parent of each pupil to be examined is reminded of the necessity for Booster injections.

The majority of Vaccinations are carried out by General Medical Practitioners in their own surgeries.

Pamphlets and Posters are displayed in all Infant Welfare Centres.

Details of persons Vaccinated during the year are as follows:-

AGES	NUMBER VACCINATED	RE	NUMBER -VACCINATED
o—ı years	285		_
1—4 years	48		4
5—14 years	36		8
15 years and over	. 4I		79
		•

## 6. AMBULANCE SERVICE (Section 27).

The City Ambulance Service also operates a service by agreement for contiguous parts of the Counties of Cheshire and Flintshire.

The Staff consists of an Officer-in-Charge and 13 Driver/Attendants and 2 Attendants (Non-Drivers), with one Clerk/Telephonist.

A new Sitting Case Car was purchased, bringing the fleet of vehicles to two Sitting Cars and four Ambulances.

I am pleased to report that better co-operation was maintained with the Hospitals, so that long ambulance journeys which should have been undertaken by public transport, have not been so frequent. Ministry of Health Circulars have emphasized that transport should not be expected because a patient has luggage, nor should relatives be called to travel with the patient to the exclusion of other patients.

Far too often the Hospitals ask for journeys which are arranged by them for the convenience of the patient. More consideration must be shown for the problems of the Local Health Authority administering the Service. The prime consideration in all cases should be the MEDICAL necessity of the patient, and other factors, e.g., convenience to the patient or his relatives, must take second place. The Local Authority will do what it can to co-operate with the Hospitals in these matters, but it must be realised that this Service is primarily an Ambulance Service and not a Transport Service.

It will be noted that the total mileage run by the Ambulances is increasing year by year.

		T	OTAL NO. OF
YEAR	TOTAL MILES	PAT	TENTS CARRIED
1951	64,685		7,662
1952	64,221		7,903
1953	11 1		10,600
1954			15,753

Much of the work has been inter-hospital and the City Ambulance Service has undertaken these journeys, but it is felt that the Service would be much more efficient if waiting time were cut to a minimum.

The periodic maintenance of the vehicles by the Transport Department has resulted in a better standard of upkeep and reliability than was possible hitherto, and credit is also due to the Ambulance Staff for their part in the care and maintenance of the vehicles.

# 7. PREVENTION OF ILLNESS, CARE & AFTER-CARE (Section 28).

# (i) Tuberculosis.

The Tuberculosis Medical Officer of the Regional Hospital Board at the City Hospital is employed on one session per week for Preventive and After Care work. B.C.G. Vaccinations were done at the Chest Clinic.

The B.C.G Scheme for vaccination of School Children was considered, though it was not started during the year.

A system of weekly cross-notification between the Health Department and the Chest Clinic (City Hospital) ensures continuity of Preventive measures. There was close liaison between the Chest Clinic and the Health Department. One Health Visitor was appointed to attend at the Clinic and to visit Tuberculosis Patients in their homes. A great improvement in the liaison between the two centres was immediately apparent.

I would like to thank the Doctors and Staff of the Clinic for their great help during the year. Preventive Tuberculosis work has been enhanced and has assumed a more concrete and purposeful form. It was easier also to assess the relative needs for rehousing of Tuberculosis Families.

Residential After Care at Wrenbury Hall (County Council) Colony was provided for selected cases, and the Council also contributed towards the cost of patients at other Tuberculosis Colonies, e.g. Barrowmore.

Home Nursing Equipment was available on loan, and the Council provided a Garden Shelter in one case.

Contacts of patients notified as dying from Tuberculosis are investigated in the same way as those notified during life. Employment conditions are investigated in all notified cases and there is liaison between the Chest Clinic and the Medical Officer of Health from this aspect.

#### Mobile Mass Radiography Unit.

The Number 3 unit of the Liverpool Regional Hospital Board visited the City from 1st December, 1954 to 11th April, 1955 and was centred on the Civil Defence Headquarters, Boughton. Visits were made to industrial concerns and to large communities. Full details will be given in the Report for 1955.

## (ii) Blind Persons.

The Chester & District Blind Welfare Society give the following data:—

	On Re	egi <b>ste</b> r	New Ca	ses 1954	Deaths 1954	
	M.	F.	М.	F.	М.	F.

(ii) Number of cases in which:—  a. Vision lost  b. Vision impaired  c. Treatment continuing at end of year	Nil.

## (iii) Epileptics and Spastics.

Epileptic and Spastic children of school age are dealt with under the Education Acts.

Three adult epileptics are known to the Welfare Department. These are accommodated in Part III accommodation. Three adult spastics are registered. Efforts were made to get suitable training in one case. A class in Handicrafts for Disabled Persons was commenced by the Welfare Authority, transport being provided by the City Ambulance Service.

A unit for spastic children at Clatterbridge Hospital was projected.

## (iv) Illness Generally.

Besides the Health Visiting, Home Nursing and Domestic Help Schemes, nursing equipment was available from the District Nurses' Home. During the year 157 articles were loaned.

Close liaison has been maintained with Hospitals regarding home circumstances and to enable needy patients to obtain Convalescent treatment.

The Health Visitors paid 2,027 visits to cases of illness.

# 8. DOMESTIC HELPS (Section 29).

Twelve full-time Domestic Helps and one Organiser were employed.

The shortage of Chronic Sick Hospital accommodation in Chester was reflected in the high proportion of these cases receiving domestic help. As these patients need help over long periods, it was usually necessary to give them part-time assistance. Bearing in mind the hard-ships and difficult circumstances of such cases, the Committee considered the appeals, in particular instances, on their merits. Ninety per cent. of the total number of hours worked were for the aged, chronic sick and infirm cases.

#### HEALTH EDUCATION.

Talks were given in the Infant Welfare Clinics to groups of mothers by Health Visitors. Pamphlets and Posters were exhibited in the Infant Welfare Clinics, Dental Clinic and the Health Department.

Illustrated lectures to Food Handlers were given by the Staff

during the year.

#### 9. MENTAL HEALTH.

#### Administration.

The Staff employed consisted of the Medical Officer of Health, the Assistant Medical Officer of Health (both of whom are approved for the purposes of the Ascertainment and Certification of Mental Defectives), two part-time Duly Authorised Officers and such services of Health Visitors as were necessary. No Psychiatric Social Workers or Mental Health Workers are employed.

There was no joint use of officers of other Authorities. Patients on trial from Mental Hospitals and on leave or licence from Mental Deficiency Hospitals were supervised by the Authorised Officers, Health Visitors or, in special cases, by the Medical Officer of Health. Reports were received from the Mental Hospitals of patients on discharge therefrom.

No duties were delegated to Voluntary Organisations.

#### Prevention of Mental Illness.

On discharge from Mental-Hospital, reports of the patients' progress were received and follow-up visits made by Health Visitors and Duly Authorised Officers.

An After-Care Club, which had been formed under the guidance of the Staff of the Hospital, began its meetings in premises provided by the Health and Education Departments. Meetings were held fortnightly or weekly.

# The Mental Deficiency Acts, 1913-38:-

(i) Ascertainment of Mental Defectives is carried out by the Medical Officer of Health and Assistant Medical Officer of Health. In borderline cases, the policy, especially with children, has been to give them every opportunity for Education (in special classes if need be) before reaching a final decision on their non-educability. After notification to the Local Health Authority, re-examination is carried out as an additional check. Particularly difficult cases are referred to the Regional Hospital Board's Consultant Psychiatrist who has special experience in such cases.

Statutory and Voluntary Supervision is the work of the Health Visitors, though special cases may be visited by the Medical Officers. The normal period for visits is three-monthly, though it will be appreciated that stable cases may only require visits annually, and difficult cases may require more frequent supervision. Certain of these visits may also be done by the Authorised Officers.

- (ii) Guardianship: There were no Mental Defectives under Guardianship in the City of Chester.
- (iii) Occupation Centre: Attendances at the Centre at the Congregational Church School Rooms, Christleton Road, increased rapidly in numbers and an arrangement with the County Council for attendance of six County children was put into operation. After the Boundary Extension on 1st April, many of these cases came under the City Authority.

By the end of the year, most of the City cases who were suitable were in regular attendance, and increases occurred only when fresh cases were notified under the Education Acts or when patients moved into the

City Area.

Mention must be made of the benefit to the pupils at the Centre which was soon abundantly apparent. The parents were rested from their responsibilities, the children were improved in manner and bearing, and were subject to that kind but firm discipline which can only be given by specially trained staff.

Transport facilities provided by the City Ambulance Services were constantly under review, and eventually all the children were transported directly from their homes to the Centre. This is advantageous in the case of Mongols (who generally are prone to Respiratory Diseases) and

Spastics (to whom walking may present a difficulty).

There is no doubt that the opening of this Centre has gone a long way to offset the dire shortage of hospital accommodation. Many cases which were classified as 'urgent' because of the prolonged strain on the Mother were relieved, though the necessity for permanent residential accommodation remained.

There are still those cases not in attendance at the Centre.

Not all Mentally Defective children are suitable for training at an Occupation Centre. Some may suffer from frequent epileptic fits; in others, their habits may make it undesirable for them to attend. Such patients are better cared for in Hospitals. Until there is sufficient accommodation for them in the Hospitals, we have been urged to accept some of them into Occupation Centres with a view to alleviating what must often be very difficult home circumstances.

### NATIONAL ASSISTANCE ACT, 1948.

Under the provisions of this Act and its 1951 Amendment (for Emergencies), three patients were dealt with during the year.

One, aged 73, was admitted to Welfare Accommodation, where she died later in the year.

The second, aged 92, was suffering from Senility and after a short period in Welfare Accommodation, it was necessary to remove her to a Mental Hospital, where she subsequently died. Senile mental changes frequently thus precede death.

The third, aged 74, was removed directly to Hospital, where, after some months, she died.

Cases in Welfare Accommodation were subsequently followed up and, in each case, there was a remarkable improvement in the well-being and happiness of the patient. It is quite common to hear the remark: "Why did'nt I come in here before?", even where there has been the bitter opposition to removal. Earlier compulsory removal may not have been possible, but much suffering, discomfort and even unhappiness might have been saved if these elderly patients could have understood and appreciated what was provided for them. It is natural, perhaps, that they cling to their own homes and belongings, however poor and unsanitary these may be, and the duty of the Medical Officer of Health in bringing up such cases for Compulsory Removal is an extremely difficult one—a fact which is not always appreciated by those who would like to see the patients admitted earlier.

Knowledge of the Welfare Accommodation provided under the National Assistance Act will gradually reach the population and we hope in future years to have fewer and fewer cases of Compulsory Removal. For the time being, we have, however, to deal with a section of the community who, being elderly, do not know of these relatively recent provisions, and in whose minds the thoughts of "Workhouse", not "Welfare", are uppermost.

It is perhaps a "sign of the times" that a number of cases referred to me this year for Compulsory Removal have, albeit at the last minute, decided to accept Welfare Accommodation voluntarily. Is it possible that news of the comfort and happiness found in our Welfare Homes is reaching them?

There is no doubt that the excellence of our Welfare Homes in Chester goes a long way to overcoming the fear of admission.

### MEDICAL EXAMINATIONS.

### (1) Residential Nurseries.

The Medical Officers carried out routine examinations of the Children in the Lache Day Nursery (Children's Department) and of those in the Children's Home, Eaton Park View on admission, discharge and special occasions.

Both the homes come under the care of the Child Care Committee.

### (2) Superannuation Examinations.

Staff of all Corporation Departments were examined by the Medical Officers for the purpose of determining their fitness for (a) Employment (b) Entry into the various Sickness Pay Schemes (c) Entry into the Corporation Superannuation Scheme.

In the case of Staff associated with School Children, the examinations have included X-Ray of chest (usually done at the Mass Radiography Unit), and for teachers in the Education Department, full reports on Forms 4 R.T.C. and 28 R.Q. were made.

The number of examinations in the year was 412, and the increasing work is shown by the following figures:—

 1952
 204 examinations

 1953
 338 examinations

 1954
 412 examinations

# WATER.

The City water supply is derived from the River Dec and is supplied by the Chester Waterworks Company. The water is filtered and chlorinated at the Company's works.

The standard of purity, absence of bacillus coli in 100 c.c.'s of the water as supplied to the consumer has been maintained during the year.

Bacteriological examinations of the water supply including water from various filter beds have been carried out twice a month. In addition, chemical analyses of water from a consumer's tap have been carried out by the Public Analyst every month, and the following table gives the result of these analyses, which conforming to the recognised standard method of reporting results are shown in parts per million of water.

# CHEMICAL ENAMINATION OF CITY WATER SUPPLY, 1954.

### Chief Sanitary Inspector's Report, 1954.

The Housing Repairs and Rents Act, which came into operation on the 30th August, 1954, together with the Decontrol of Slaughtering, added substantially to the work of the Department.

Unfortunately, during this period, the Sanitary Staff was reduced to 50 per cent. of its establishment, owing to the resignation of three of its members, and these vacancies had not been filled by the year end.

\*Sec. 92 P.H.A. 1936. Abatement of Nuisances.

Case 1.

Foc

Adr

- (a) Court order: r month, Fine £2.
- (b) Court Order: 28 days, Fine £2.
- (c) Daily Penalty imposed.
  Total £7/10/-.

### Case 2.

Summons withdrawn on payment of costs. Work completed before hearing.

### HOUSING.

Undertakings to close for human habitation the undementioned 16 houses were accepted by the City Council, under Section II of the Housing Act, 1936:—

- Part (B).

  14, Duke Street; 8, Watkins Court, Pitt Street; 3, Edwards Court, Duke Street; 2, Park Terrace, Foregate Street; 3 and 4, Evans Court, Queen Street; 7 and 9, The Mount, Boughton; 55, New Crane Street; 2 and 4, Green Lane Cottages, Saltney; 6, Grosvenor Court, New Crane Street; 7, Duckers Court, Castle Street; 2 and 3, St. Martin's Court, Nicholas Street; 79a, Brook Street.
- Part (A). Clearance Areas—Houses Demolished.

  15 and 17, Princess Street; 1, 2, 3 and 4, Edwards Court,
  Commonhall Street; 1 and 3, St. Martin's Ash, Nicholas
  Street.

All the tenants of houses in Parts (A) and (B) were re-housed by the Corporation. The houses demolished were situated in Clearance Areas, demolition having been delayed since pre-war.

The Sanitary Inspectors made 480 visits to homes of applicants about to be re-housed by the Corporation to ascertain the state of cleanliness and to obviate vermin being transferred to new houses.

It was only necessary to disinfest rooms and contents in 12 instances.'

### HOUSING REPAIRS AND RENTS ACT, 1954.

This Act came into force on the 1st September, 1954. The following table gives details of applications and granting of Certificates of Disrepair from 1st September, 1954, to 31st March, 1955.

Number of Applications for Certificates	Number granted	Number refus <b>e</b> d	Number of Applications for revocation of Certificates	Number granted	Number refused
37	35	2	I	Nil	I

### ATMOSPHERIC POLLUTION.

In the City, smoke pollution is caused chiefly by domestic chimneys and the Railways, there being few large industrial undertakings having coal-fired boiler plants.

Forty-three observations have been made on factory chimneys and complaints investigated of excessive smoke from three Laundries, a Scent Works, a Brewery and Tobacco Works. Appropriate informal action was taken in these cases and observations on these and other chimneys continued throughout the year.

Twenty-eight complaints were received from areas in the vicinity of the Leadworks, regarding smells of a burning rubber type and sulphurous fumes.

The Inspector of Alkali, etc., Works has been informed of the complaints and investigations made in co-operation with the Sanitary Inspectors.

Reports of complaints received have been submitted monthly and considered by the Public Health Committee and City Council. Interviews with the Works Manager have been held and on behalf of the owners he assured the Council that, in collaboration with the Alkali, etc., Works Inspector, they will apply the best practical means to abate the nuisances.

Recording apparatus, etc., have been installed by the Leadworks Company on a site in the path of the prevailing winds in an effort to assess the extent of the pollution.

### CANAL BOATS.

As in previous years the number of boats using the canal has continued to fall.

Six canal boats were examined during 1954, and five required the service of complaint notes.

At the year end, three notes had been complied with and certificates received from other inspecting authorities that the required work had been completed.

### COMMON LODGING HOUSE.

There is only one privately-owned Common Lodging House (males only) licensed by the City Council.

Ten surprise and routine inspections have been made and several sanitary improvements have been carried out on request and under supervision,

### RODENT CONTROL.

Under the scheme of the Ministry of Agriculture and Fisheries, a consolidated grant of 50 per cent. of the approved net expenditure, incurred during the financial year 1954-55 is made to Local Authorities. Certain conditions relating to organisation, employment methods, staffing and the carrying out of effective procedure have to be complied with to the satisfaction of the Ministry.

Corporation sewers, surface properties and private houses are treated free of cost. Grant aid is not available in respect of expenditure incurred by the treatment of commercial or industrial premises, the costs being fully re-imbursed by the occupiers so that no charge falls on public funds.

Rodent control in Corporation sewers has been intensified. Two "maintenance" and one "test bait" treatments being carried out during the year.

The results of these treatments are shown in the following tables:

Sewer Maintenance Treatment No. 2/53/54. 22nd February to 18th March, 1954.

### Sewer Test Baiting. July, 1954.

No. of Manholes Tested			Result	
	C.	G.	S.	No Take
140	6	2	5	1 27
		1	{	1

Test baiting with damp sausage rusk was applied in the areas of the City having modern piped sewers, as from practical experience the old sewers of the City are known to be rat infested.

> Sewer Maintenance Treatment No. 1/54/55. 23rd August to 15th September, 1954.

Bait base: - Sausage rusk plus Poison-Zinc Phosphide.

There is little doubt that effective treatment of the sewers reduces the complaints from surface properties. In built-up areas such infestations are eventually traced to defective drains and the complaints remedied following repairs.

The sewers and Corporation refuse tips remain the major source of infestation in the City. The tip, sewage works and land adjoining are kept under routine observation and received ten treatments during the year.

The rodent staff (1 Foreman and 2 Operators) are engaged for a total of approximately three months annually in the treatment of sewers, sewage work and refuse tips alone.

In addition to the 2,776 visits paid to manholes by the Rodent Staff, 4,017 visits were also made by this Staff and Sanitary Inspectors to surface properties during the financial year ended 31st March, 1955.

Estimated total of vermin destroyed: Rats-7,150; Mice-4,694.

Hoole U.D.C. was incorporated in the City from the 1st April, 1954, and the above figures include work carried out in that area.

The result of searches, complaints and the services to premises in the City is shown in the following table:—

					4	.5

NON-AGRICOLTURAL

### RAG FLOCK AND OTHER FILLING MATERIALS ACT, 1951.

The above-mentioned Act came into operation on 1st November, 1951, and repealed the Rag Flock Acts of 1911 and 1928. Its purpose is to secure the use of clean filling materials in upholstered articles or other articles which are stuffed or lined.

The Act requires the licensing of premises where filling materials are used for upholstering, stuffing or lining of bedding, toys or baby carriages but, unfortunately, excludes premises where these articles are remade or reconditioned.

Fourteen visits were made to premises within the City but only one came within the purpose of the Act and received a licence.

One sample of Loose Washed Flock (50% wool) was submitted to the Prescribed Analyst for examination and was certified to be in accordance with the standard of cleanliness laid down in the Act.

### THE MILK AND DAIRIES REGULATIONS, 1949.

The following are registered to sell milk in the City in accordance with the above Regulations. The figures include Hoole U.D.C., taken over from 1st April, 1954.

Premises registered as Dairies	6
Purveyors and Shopkeepers retailing bottled milk only	30
Purveyors with premises outside, retailing in City	14
TOTAL	20

### MILK (SPECIAL DESIGNATIONS) REGULATIONS, 1949.

The following licences were issued for the sale of designated milk within the City during the year ended 31st December, 1953:—

(a)	Pasteuriser's Licence	I
(p)	Dealer's Licences:—  (i) T.T. Milk  (ii) Patsteurised Milk  (iii) Sterilized Milk	48
(c)	Supplementary Licences:— T.T. Milk	4

### FOOD HYGIENE.

(FOOD AND DRUGS ACT, 1938, SECTION 13 AND BYELAWS UNDER SECTION 15).

The Chief and Deputy Chief Sanitary Inspectors have continued to give lectures and demonstrations on the principles of hygiene and the dangers involved in the neglect of personal and kitchen hygiene to staffs of food premises and numerous organisations.

The recording and detailed inspection of food premises was continued during the year, but progress was impeded by shortage of staff.

Detailed inspections have been made and on initial inspection the premises were classified according to (a) suitability of premises (b) type and condition of equipment (c) methods employed and (d) general standards of hygiene.

Initial inspections for this purpose numbered 74 and re-inspections 91.

Where necessary, the attention of proprietors and management was called by interview and letter to defects, &c., requesting co-operation in order to advance the grading classification of these premises.

Such co-operation has been willingly given, resulting in a marked improvement in the standard without need for statutory action.

The work carried out included:-

- (i) Repairs to walls, ceilings, floors, doors and windows, etc.
- (ii) Painting of walls, ceilings and woodwork.
- (iii) Provision of adequate ventilation and lighting.
- (iv) Removal of refuse, etc., and regular cleaning of premises, etc.
- (v) Personal cleanliness, overalls, etc.
- (vi) Provision of wash basins, sinks, and hot and cold water supply, soap and clean towels, etc.
- (vii) Food storage accommodation and refrigerators.
- (viii) Provision of sanitary accommodation.

The following table gives the state of classification of food premises inspected and re-inspected to the end of 1954 since commencement of the scheme: —

Clas	sification o Inspectio	 ification of same es at end of 1954
Excellent	30	 . 50
Good	161	 . 180
Fair	121	 . 120
Poor	78	 . 45
Bad	9	 : 4
Totals	399	 . 399

NOTE.—Excellent means first class in all respects, Good means minor defects only, Fair means few small defects in structure, equipment or methods, Poor means below standard generally and Bad means very unsatisfactory.

The four premises classified "bad" had been satisfactorily dealt with early in 1955.

The following is a list of the food premises in the City.

TYPE	NUMBER	TYPE	UMBER
Bakehouses	. 16	Kiosks	5
Brewery	. I	Licensed Victuallers	107
Butchers' Shops		Wholesale Meat Depots	2
Cake Shops		Mineral Water	
Cheese Factors		Manufacturers	2
Dairies		Mobile Canteen	I
Egg Packing Station		Restaurants and Cafes	69
Fishmongers		School Kitchens	17
Fried Fish & Chip Premise		School Meals Centres	ΙI
General Stores		Slaughterhouses	. 2
Greengrocers	. 55	Sweet Manufacturers	2
Grocers and Provisions		Sweet Shops	41
Hotels		Tripe Shops	
Ice Cream Manufacturer		Wholesale Grocers	. 6
Ice Cream Wholesale		Works & Stores Canteens	5 15
Depot	s I		

### FOOD POISONING—INVESTIGATIONS.

The Sanitary Inspectors made 12 investigations and re-visits to suspected cases notified to the Medical Officer of Health, and collected 14 specimens of food, faeces, &c., for bacteriological examination.

### FOOD AND DRUGS ACT, 1938 (Section 14).

	following premises are registered in the for:—	NO	. OF
		PREMISES	INSPECTIONS
(a)	The sale, manufacture for sale, or storage of ice cream intended for sale	186	129
(p)	the preparation or manufacture of sausages or potted, pressed, pickled or preserved food intended for sale	30	42

### ICE CREAM.

### CHEMICAL ANALYSIS.

The Food Standards (Ice Cream) Order, 1953, came into operation on 1st June, 1953.

The Order provides that Ice Cream must contain at least 5% fat, 10% sugar and 7½% milk solids other than fat. The standard applies to any products (including those supplied in catering establishments) which are sold as "ice cream" or "ices", but does not apply to water ices sold as such or to "ice lollies".

The fat content of the nine samples analysed is shown in the following table:→

FAT CONTENT PER CENT.									
Standard 5 and 4 per cent.	5 and under 6	6 and under 7	7 and under 8	8 and under 9	9 and under 10	10 and under	rr and under	12 and over	
Number of Samples	I	I	3	1	I	1		I	

The samples also satisfied the tests for sugar content, and milk solids other than fat.

### BACTERIOLOGICAL SAMPLES.

During the year, 46 samples of ice cream were bacteriologically examined by the Public Health Laboratory Service, Hamilton Square. Birkenhead.

The following table sets out the results:-

	R OF SAMPLES
Grade 1—Satisfactory	42
Grade 2—Satisfactory	3
Grade 4—Unsatisfactory	I
TOTAL	46
•	

There were four samples containing Faecal B. Coli (concerning two premises). In both cases the premises, utensils and methods were examined and following up samples were reported to be up to standard (Grade 1), with Faecal B. Coli absent.

All the premises, &c. on which ice cream was manufactured, stored or sold were regularly inspected and the condition of utensils. methods, etc. found to comply with the requirements of the Ice Cream (Heat Treatment) Regulations, 1947-1952.

### LICENSED PREMISES

132 visits were made to licensed premises and a comprehensive

report submitted to the Licensing Justices.

Special attention has been directed to hygiene and the provision of sanitary accommodation. Particular attention has also been paid to the condition of beer cellars, especially in regard to the type and condition of piping from barrel to pump, cleanliness, structural condition, ventilation and drainage of floor and, where necessary, repairs and alterations have been carried out on request.

No complaints were received regarding unclean drinking utensils,

&c. but this gives no room for complacency.

The generally high standard of hygiene in licensed premises within the City was maintained.

### FOOD AND DRUGS ACT. 1938.

The following tables show (1) the samples submitted to the Public Analyst (H. Lowe, Esq., M.Sc., F.R.I.C.) during the year, and (2) the administrative action taken in respect of samples certified to be not genuine.

### MILK ANALYSES, 1954.

Total Samples analysed						80
Number certified "not genuine"	•••					4
Samples below standard for fat						2
Samples below standard for solic	ls not f	fat	•••			3
Average quality (Standard			Solids	not fat	8.5%):-	-
			• • •	3.66.%		
Solids not fat		•••		8.71%		

### EXAMINATIONS OF MILK FOR TUBERCULOSIS.

Seventeen samples of milk were sent to the Medical Research Laboratory, Birkenhead, for examination for the presence of tuberculosis of bovine origin.

The samp'es consisted of T.T. milk (14) and three of Undesignated milk.

All were certified to be negative.

### BACTERIOLOGICAL MILK SAMPLES.

Results of the various tests applied to 165 samples of milk submitted for examination are shown in the following table:—

			NUM	BER
DESIGNATION	NO. OF SAMPLES	TEST APPLIED	PASSED	FAILED
Pasteurised	51	51 Phosphatase Methylene Blue		
Certified T.T	76	Methylene Blue Coliform	70 76	
T.T. Pasteurised	34	Phosphatase Methylene Blue	33 31	1 3
Sterilized	1	Turbidity	1	
Undesignated	3	Methylene Blue	1	-

### NOTES:-

- (a) The "Phosphatase Test" denotes efficient pasteurisation.
- (b) The "Methylene Blue Test" assesses keeping qualities.
- (c) Presence of coliform bacillus indicates facael contamination.

The attention of the Producer and the Ministry of Agriculture and Fisheries was called to the unsatisfactory samples. Subsequent samples passed the appropriate tests.

### PET ANIMALS ACT, 1951.

This Act, which came into operation on 1st April, 1951, regulates premises on, and conditions under which, pets are housed and sold.

Five premises were licensed under the Act and 23 re-inspections made during the year. All the premises complied with the terms of their licences.

### SLAUGHTER OF ANIMALS ACT, 1933.

Twenty-eight Renewal and six New Licences were issued to Slaughtermen during the year.

### SLAUGHTERING IN THE CITY.

Until the 30th June, 1954, all slaughtering was carried out at the Abattoir by the Ministry of Food, headage charges being paid by them in accordance with the Bye-Laws. Decontrol took place as from the 1st July, when slaughtering became the responsibility of individual butchers.

Application for licencers of a 'private' slaughterhouse was refused by the Council, but on 'appeal' the licence was granted, subject to compliance with the schedule of works required by the Corporation.

Animals slaughtered during 1954:-

Cattle	 		2124
Calves	 •••		2371
Sheep	 ٠٠,	•••	11395
Pigs	 •••		4841
		TAT	
	10	TAL	20731

Meat Marking is carried out at the Abattoir where a Meat Inspector is on duty whilst slaughtering is in progress.

Ante-mortem inspections are made of all animals and notes taken of any abnormalities which might assist in the subsequent post-mortem examinations which are carried out on every animal slaughtered.

The weight of food condemned during the year amounted to:-

			Tons	Cwts.	Qrs.	Lbs.
Meat and offals			27	I	2	27
Other foods	• • •	,	6	10	2	2
	ТО	TAL	33	12	I	I

All condemned meat is 'dyed green' before removal to an approved processing to ensure that it cannot be used for human consumption.

The following tables show (1) percentage of animals affected with disease and (2) details of all food condemned.

54 TABLE I. CARCASES INSPECTED AND CONDEMNED, 1954.
